Lung Screening Saves Lives

By: The American Lung Cancer Screening Initiative 

In 2025, over 124,730 Americans died from lung cancer. That is more deaths than deaths from breast, prostate, and colon cancers COMBINED.

Lung cancer is the number one cancer killer by far. But it doesn't have to be. Lung cancer screening can identify lung cancer at early stages, when the chance for cure is high! Lung cancer screening is covered by most insurances, is painless, and is fast!
